

Fluid Management Services (Standard & Add-on Package)

Comprehensive fluid management services keep liquid cooling solutions running at peak efficiency

Standard Service Package

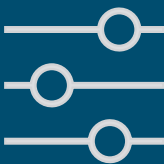

Customizable Add-ons²

Fluid Analysis

Examine properties and performance of the coolant to ensure efficient heat transfer and prevent system issues.
Analysis example:

- On-site fluid sampling
- Fluid chemistry test
- Coolant concentration
- Contamination detection
- Degradation analysis

Fluid Rebalance & Remediation

Rebalances and restores fluid to recommended setting for optimal heat transfer and contamination removal:

- pH restoration
- Coolant disinfection
- Coolant treatment
- Coolant chemistry rebalance

System Flush & Fill

Drain and clean fluids to remove scale and debris, and refill with fresh coolant to maintain the efficiency and longevity of cooling systems:

- Drain existing coolant in the system
- Flush system with solutions to remove scale, debris, and contaminants
- Remove and replace filter
- Refill system with fresh coolant

- **Fluid service packages** offered as a separate **add-on to SLAs**
- **Standard, regular fluid service is required** for warranty coverage (whether customer chooses to go through Flex, perform in-house, or hybrid model)
- **Warranty consideration:** customers must ensure fluids are measured and maintained with appropriate records & cadence
